

Preemergence Control of Broadleaves PLUS Added Control of Grasses in Sunflower and Soybean

- Preemerge performance control of broadleaf weeds like kochia, Russian thistle, redroot pigweed, palmer pigweed, lambsquarters, waterhemp.
- Added benefit of preemergence control of annual grasses like green, yellow, and giant foxtail, barnyard grass, and others.
- Greater crop flexibility with reduced rotation intervals on corn and other crops to allow fall application.
- Tank-mix with any glyphosate for preplant program.
- Excellent no-till product with no incorporation needed, just rainfall or irrigation for activation.

Sunflower & Soybean

Fall or Spring: Prior to planting up to 3 days after planting

Average Use Rates: 19-38 oz/A (See label for specific soil, organic matter use rate recommendations.)

- Coarse soils 19-25 oz/A
- Medium soils 19-32 oz/A
- Fine soils 21-38 oz/A

Rotational Crop Guideline

Soybean, Sunflower	Anytime
Wheat, Barley, Rye, Triticale	4 ½ months
Corn, Field	10 months
Sorghum	10 months
Alfalfa, Other cereal grains	12 months
Sweet Corn	18 months
Canola	24 months
Sugar Beets	36 months
