

EVITO® 480 SC Fungicide with Xylem-Pro Technology™ gets into the plant faster for rapid and reliable protection.

Effective disease control often can be the difference between profit and loss. An advanced strobilurin fungicide that interferes with respiration in plant-pathogenic fungi and inhibits spore germination and mycelial growth, EVITO® works quickly to control the most prevalent diseases in wheat, at application rates of just ounces per acre.

EVITO is the next generation, low-use fungicide with Xylem-Pro Technology™. Xylem-Pro Technology is an innovative technology that distributes the fungicide throughout the plant, moving to all areas of the leaves with water flow. Once applied to the surface, EVITO is rainfast in as quick as 15 minutes. Protecting you from unexpected environmental threats.

DISEASE ACTIVITY IN WHEAT

For control of leaf rust, stripe rust, stem rust, septoria leaf and glume blotch, tan spot and powdery mildew.

CROPS

Wheat, field corn, soybeans, fruiting vegetables and leaf petiole vegetables, listed low-growing berries, peanuts and potato and tuber vegetables

ACTIVE INGREDIENT

Fluoxastrobin

TIMING

For optimum results, begin applications preventatively and continue as needed on a 14 to 21 day interval. Use the higher rates and shorter interval when disease pressure is high.

APPLICATION

- Ground
- Aerial
- Chemigation
- Tank-mix

RATE PER DISEASE

Leaf rust, stripe rust, stem rust, septoria leaf and glume blotch and tan spot:

2 to 4 fl oz/A

Powdery mildew:

2.5 to 4 fl oz/A

APPLICATION INSTRUCTIONS

1. Prepare a suspension of EVITO 480 SC in a mix tank. Fill tank with $\frac{1}{2}$ to $\frac{3}{4}$ the desired amount of water and start hydraulic agitation
2. Add the required amount of EVITO and then the remaining volume of water
3. Then set sprinkler to deliver no more than 0.4 inch of water per acre
4. Start sprinkler and uniformly inject the suspension of EVITO into the irrigation water line so as to deliver the desired rate per acre

The suspension of EVITO should be injected with a positive displacement pump into the main line ahead of a right angle turn to insure adequate mixing.

RAINFASTNESS

In as little as 15 minutes
