

## Spartan<sup>®</sup> Charge herbicide – Excellent preemergence control, plus preplant burndown

For a cleaner, faster start, Spartan<sup>®</sup> Charge herbicide provides sunflower growers excellent residual control of troublesome broadleaf weeds including ALS and glyphosate-resistant kochia, plus preplant burndown of broadleaf weeds. Spartan Charge provides all of the benefits of Spartan 4F, plus more. You see visible results within hours of application. When it comes to controlling “puffball” kochia and other troublesome weeds, there’s nothing better that gets you in the field

faster than Spartan Charge – even in cold weather conditions.

Spartan Charge can be applied alone as a preemergence foundation treatment for broadleaf control or in a tank mix with glyphosate and other preplant burndown broad-spectrum herbicides.

It is ideal for no-till, minimum-till and conventional tillage practices. Get in the field fast.

### Features and Benefits:

#### **Excellent Preemergence Activity**

Provides superior control of troublesome weeds such as kochia and other broadleaf weeds before they emerge.

#### **Quick Postemergence Preplant Burndown Activity**

Fast acting on “puffball” kochia and other broadleaf weeds in sunflower fields, even in the colder weather conditions seen in the Northern Plains.

#### **Fits All Tillage Systems**

Convenient flexibility for its use in no-till, minimum-till and conventional tillage.

#### **Optimized Suspoemulsion**

Tank mixes easily with other preemergence herbicides or burndown herbicides such as glyphosate, glufosinate and paraquat.

#### **Flexible Application**

May be applied as a preemergence application for control of small (less than 2”) susceptible broadleaf weeds such as kochia, as an early preplant or as a burndown prior to planting.

#### **Effective on ALS- and Glyphosate-Resistant Weeds**

Multiple modes of action for an excellent tool in weed resistance management.

#### **Reduced Rotation Intervals**

Greater crop flexibility means the rotation intervals allow you to apply Spartan Charge in the fall.

#### **Adjuvant Unloaded**

Flexibility for adjuvant selection.

## Spartan® Charge + Glyphosate is an Ideal Combination for Long Lasting Residual Control of Problem Broadleaf Weeds — Plus Superior Broad-spectrum Burndown of Broadleaf Weeds and Grasses

Untreated

The residual control of Spartan Charge keeps fields clean.

Crops	Spartan Charge
Sunflowers	◆
Dry Peas	◆
Soybeans	◆
Fallow	◆
Dry Beans	24C in ND only*

Rates: Spartan Charge herbicide can be used at rates from 3.75 fl oz/A to 8.50 fl oz/A depending upon soil types.

\* Spartan Charge may be used on dry beans with 24C labels in ND only. See product label for details.

Remember, Spartan Charge provides all of the benefits of Spartan 4F and more. You can use it as a preemergence herbicide for control of tough broadleaves like kochia and “puffball kochia”, apply it pre-plant or as a preplant burndown with herbicides such

as glyphosate. You get long lasting residual and fast, effective ALS- and glyphosate-resistant weed control. It works great in no-till, minimum-till and conventional sunflowers. For more information, please contact your FMC Star Retailer or visit [FMCcrop.com](http://FMCcrop.com).
